

Final 2025 Report 724  
for  
Fondation Eagle

Sinus rhythm

world medical fund  
for children

**Interim or Final report:** Final.

**Donor name:** Fondation Eagle

**Fondation Eagle reference:** FE724

**Name of Charity:** World Medical Fund for Children

**Introduction:** Mobile Children's Clinics working in the remote villages

**Date of grant accepted:** 4<sup>th</sup> October 2024

**Amount:** "The Foundation will finance the total of GBP £31,290 of which £25,250 for purchasing medicines for 1 year for your Mobile Clinic 1 and £6,040 for the Clinical Officer's salary also for 1 year for your Mobile clinic services in Nkhotakota district and its environs, in the central region of Malawi".

**Conversion rate, date & amount in local currency:** £1 = 2,200Mk making 68,830,000Mk

**Name and exact location of the project:** "The 2nd Children's Mobile Clinic; Nkhotakota district and its environs, Malawi.

**Period of Project:** 12 months

**Project beneficiaries:** We have treated a total of 27,976 sick children, so we are significantly above our annual target of 25,000.

**Details of the project:** A tried and proven solution to the high child mortality rate in Malawi, the mobile clinic provides the only realistic access to medical care for sick children in the villages. Our medical team are equipped with diagnostic tools and a wide range of medicines to treat most conditions on the spot; those children needing surgery or in-patient care we can take to hospital in our ambulance.

This methodology remains the most cost-effective solution to the challenges that exist of little or no infrastructure, transport systems or access to primary health care in the rural areas. The reality we face is, without major investment it is most likely to remain so for at least the medium term, if not longer.

The changes to the original methodology are in now carrying more sophisticated diagnostic tools, in terms of ultrasound machines and various analysers - enabling more accurate diagnosis.

The impact is immense; it relieves suffering and saves lives.

**Detailed budgets and actual expenditure summary and comparison:**

FF 724 final report		
<b>Project 12 month Budget</b>	<b>Cost in £</b>	<b>Convert to Mk</b>
Medicines	25,250	55,550,000
Clinical Officer	6,040	13,288,000
<b>Total</b>	<b>31,290</b>	<b>68,838,000</b>
<b>Project Expenditure</b>	<b>Cost in £</b>	<b>Convert to Mk</b>
Medicines	25,727	56,599,400
Clinical officer	6,040	13,288,000
Doctor, 2nd clinic*	-	-
<b>Total</b>	<b>31,767</b>	<b>69,887,400</b>
<b>Balance</b>	<b>-477</b>	<b>(1,049,400)</b>
*Funded from our reserves		

We have taken the token cost of medicines across both clinics and apportioned 50% to each clinic (in line with the director's proposal to double the costs of a single clinic) as keeping them separate would have been costly in labour and storage costs. There is a small overspend that we have funded from our reserves. We buy the medicines whenever they become available because of the inevitable and continual shortages due to the dire lack of FOREX in country as all medicines have to be bought in and paid for in \$US.

**Results:** We have exceeded our target with 27,976 sick children treated.

**Follow up:** The project has been running since 2003, so now in its twenty-second year; continuity is ensured because of the overwhelming demand.

**Conclusion:** All objective have been achieved.

**Signature and date:**

*MBurt*

## The situation in Malawi.

There are dire shortages of FOREX; as virtually everything must be imported that has resulted in dire shortages across the board covering everything from medicines and basic food items to aviation fuel.

The knock-on effect is rampant inflation.

The roads have deteriorated to a level that journey times have doubled.

Despite these challenges we have met or exceeded our target over this period.

The presidential elections passed relatively peacefully with the previous president replacing the incumbent.

We are highly supportive of the move that we are seeing across sub-Saharan Africa with the move away from Clinical Officers (who filled a vital gap over the years when no doctors were available) to now employing doctors.

This brings a significant increase in skills, notable especially in the fields of knowledge on pharmacokinetics and pharmacodynamics<sup>1</sup>.

It will naturally come at a cost but this must be the way forward. We are supporting our trusted Clinical Officer who has been with us for many years through his studies for a degree in Public Health which will be of future value to the organisation.

## A vital part of our work

The malaria testing station; a key part of every mobile clinic.

---

<sup>1</sup> Together, they guide dosing and predict drug behaviour. Pharmacokinetics (PK) and pharmacodynamics (PD) describe the two-way relationship between a drug and the body. **Pharmacokinetics** is what the body does to the drug (absorption, distribution, metabolism, excretion - ADME), while **pharmacodynamics** is what the drug does to the body (mechanism of action and pharmacological effects).

## Our vehicle.

Our trusty friend; the tough terrain it works in means servicing interval are down to 5,000km; this is essential to keeping it in tip top condition.

The image below is from the main road between our base at Nkhotakota and Dwangwa where most of our clinics are.
